Many new aspects, (still working on new buildings), have been introduced in Horde 2.Q: Batch - Return exit code I'm trying to return the exit code of a batch script. Right now I have this code in my batch file: rem Load Generic Script Template call:GenericTool.bat :loop if errorlevel 1 (echo "generic: error loading template" exit 1) goto loop :GenericTool.bat rem Generic Tool code to run here goto:eof Now, when I run it with following command, it shows me "generic: error loading template", and when I run it with this command, it returns an exit code of 1. call:GenericTool.bat exit If I run the following command, it executes the "GenericTool.bat" then check the exit code, it shows that the exit code is 1. call:GenericTool.bat exit 1 But the test above doesn't exit the script. How can I make this return an exit code that would exit the script? Thanks. A: set exitcode=1 rem Generic Tool code to run here goto:eof if "%exitcode%" neq "" exit /b %exitcode% A: As suggested, you need to set exit code to 1. But maybe this simpler approach suits better: exit /b 1 to exit the batch file use exit /b 1. For more help see :help exit A: You can also use @exit To specify an exit code you can use this instead of @exit 1 Which would look like this @exit 1 If all goes according to plan, the general election will be over by the time you wake up in the morning. About halfway through the day you will know if the Conservatives will win an overall majority and form the next government.
