User interface and supported file formats It sports a clean layout that allows you to make use of several analysis modes in order to explore data, such as objective analysis of physical elements in surface, streamline analysis of wind fields, and isolines of analytical fields. Additionally, you can activate the full screen mode, zoom in or out of the rendered data, undo or redo your actions, switch between a navigation mode and one used specifically for image exporting options, and generate a thumbnail of the current image. The Graphics Layer gives you the possibility to work with multiple layers at the same time. The tool supports several data formats, such as WMO GRIB1/GRIB2, NetCDF, GrADS, and MICAPS. Projection and maps MeteoExplorer Portable allows you to start or stop rendering the animation, go to the previous or next time instance and specify the time interval for displaying the animation (automatic, 6, 12 or 24 hours). You can choose between different projection types, such as Lambert, Mercator, North or South hemisphere, equal distance or area, or orthographic, and introduce the projection longitude and latitude. When it comes to working with the map, you can pick the theme (black, white or color), country and province, draw graphics inside the country, and show terrain, scale, cities, counties, country boundaries, and provinces. What's more, the application comes bundled with two tools dedicated for synoptic scale and mesoscale. Each of the aforementioned scaling modes comes with its own parameters. For example, you can add heavy or light rain, moderate snow, fog, close isoline and frost line for the synoptic scale, while the mesoscale allows you to tweak the level, line color, style and width, and font for several elements. Exporting options and several configuration settings You can export rendered data to BMP, JPEG, PNG, EMF or ICO file format or copy the image to the clipboard so you 6a5afdab4c
